

HARNESS CUSTOM DELEGATE

Install your Delegate

Delegate Name

docker-delegate-ganesh-localhost

Run the following command to install

```
docker run --cpus=1 --memory=2g \
-e DELEGATE_NAME=docker-delegate-ganesh-localhost \
-e NEXT_GEN="true" \
-e DELEGATE_TYPE="DOCKER" \
-e ACCOUNT_ID=ucHySz2jQKKWQweZdXyCog \
-e DELEGATE_TOKEN=NTRhYTY0Mjg3NThkNjBiNjMzNzhjOGQyNjEwOTQyZjY= \
-e DELEGATE_TAGS="" \
-e MANAGER_HOST_AND_PORT=https://app.harness.io us-docker.pkg.dev/gar-prod-setup/harness-public/harness/delegate:25.06.86100
```

Here in custom delegate i just installing python ansible vim and other some base requirements

us-docker.pkg.dev/gar-prod-setup/harness-public/harness/delegate:25.06.86100

This the base image i taken and install the tools because we don't have the certificated for connecting to harness

So we use the predefine image of harness and build the image

Dockerfile

```
# Use the existing Harness delegate image
FROM us-docker.pkg.dev/gar-prod-setup/harness-public/harness/delegate:25.06.86100

# Switch to root to install tools
USER root

# Fix conflict: Replace curl-minimal with full curl
# Install python3, pip, vim, unzip (pip is in python3-pip package)
RUN microdnf install -y python3 python3-pip vim unzip && microdnf clean all
```

```
# Install ansible using pip

RUN python3 -m pip install --no-cache-dir ansible

# Return to original delegate user

USER 1001

# No need to set WORKDIR, CMD or HEALTHCHECK - inherited from base

~
```

```
# Use the existing Harness delegate image
FROM us-docker.pkg.dev/gar-prod-setup/harness-public/harness/delegate:25.06.86100

# Switch to root to install tools
USER root

# Fix conflict: Replace curl-minimal with full curl
# Install python3, pip, vim, unzip (pip is in python3-pip package)
RUN microdnf install -y python3 python3-pip vim unzip && microdnf clean all

# Install ansible using pip
RUN python3 -m pip install --no-cache-dir ansible
# Return to original delegate user
USER 1001

# No need to set WORKDIR, CMD or HEALTHCHECK - inherited from base
~
~
~
~
~
```

```
[root@instance-5 docker]# docker build -t ganesh6498/custom-delegate:latest .

[root@instance-5 docker]#

New Delegate

Delegates are worker processes that run on your infrastructure to execute tasks on behalf of the Harness platform. [Learn more about Delegates](#), [watch Video](#)

Run the following command to install

```
docker run --cpus=1 --memory=2g \
-e DELEGATE_NAME=docker-delegate-ganesh-localhost \
-e NEXT_GEN="true" \
-e DELEGATE_TYPE="DOCKER" \
-e ACCOUNT_ID=ucHySz2jQKKWQweZdXyCog \
-e DELEGATE_TOKEN=NTRhYTYOMjg3NThkNjBiNjMzNzhjOGQyNjEwOTQyZjY= \
-e DELEGATE_TAGS="" \
-e MANAGER_HOST_AND_PORT=https://app.harness.io us-docker.pkg.dev/gar-prod-setup/harness-public/harness/delegate:25.06.86100
```

Run this command to enable auto-upgrade for Docker Delegate [🔗](#)

```
docker run --cpus=0.1 --memory=100m \
-v /var/run/docker.sock:/var/run/docker.sock \
-e ACCOUNT_ID=ucHySz2jQKKWQweZdXyCog \
-e MANAGER_HOST_AND_PORT=https://app.harness.io \
-e UPGRADER_WORKLOAD_NAME=docker-delegate-ganesh-localhost \
-e UPGRADER_TOKEN=NTRhYTYOMjg3NThkNjBiNjMzNzhjOGQyNjEwOTQyZjY= \
-e CONTAINER_STOP_TIMEOUT=3600 \
-e SCHEDULE="0 *1 * * *" harness/upgrader:latest
```

For Advanced configuration options, refer to [documentation](#) [🔗](#)

Verify Delegate connection to Harness Manager

🟢 Heartbeat received 🟢 Delegate initialized

Lets go and check the installments in container

```

This the process of custom delegate

With this custom delegate we perform some work they are

Create pipeline which have build and deploy stage

Steps:

Step 1: maven

Maven clean package

step 2: Docker build image

Step 3: write a script to take ips from the gcp using dynamic inventory which consist in local host where delegate present and the ip passed as output for a variable

```
# Assign image name and tag from Harness runtime

DOCKER_IMAGE="<+pipeline.stages.build2.spec.execution.steps.BuildAndPushDockerRegistry_1.artifact_BuildAndPushDockerRegistry_1.stepArtifacts.publishedImageArtifacts[0].imageName>"
TAG="<+pipeline.stages.build2.spec.execution.steps.BuildAndPushDockerRegistry_1.artifact_BuildAndPushDockerRegistry_1.stepArtifacts.publishedImageArtifacts[0].tag>"

echo "DOCKER_IMAGE = $DOCKER_IMAGE"
echo "TAG = $TAG"

ls -l /root
# Use with Ansible
#ansible-playbook -e image_name="${DOCKER_IMAGE}:${TAG}" ansible.yaml

ansible-inventory --list > hosts
jq -r '["tag_items___vault___"].hosts[]' hosts > vault_ips.txt
cat vault_ips.txt

host=$(paste -sd' ' vault_ips.txt)
echo $host
```

```
# Assign image name and tag from Harness runtime
DOCKER_IMAGE="<+pipeline.stages.build2.spec.execution.steps.BuildAndPushDockerRegistry_1.artifact_BuildAndPushDockerRegistry_1.stepArtifacts.publishedImageArtifacts[0].imageName>"
TAG="<+pipeline.stages.build2.spec.execution.steps.BuildAndPushDockerRegistry_1.artifact_BuildAndPushDockerRegistry_1.stepArtifacts.publishedImageArtifacts[0].tag>"

echo "DOCKER_IMAGE = $DOCKER_IMAGE"
echo "TAG = $TAG"

ls -l /root
# Use with Ansible
#ansible-playbook -e image_name="${DOCKER_IMAGE}:${TAG}" ansible.yaml

ansible-inventory --list > hosts
jq -r '["tag_items___vault___"].hosts[]' hosts > vault_ips.txt
cat vault_ips.txt

host=$(paste -sd' ' vault_ips.txt)
echo $host
```

```
5 echo DOCKER_IMAGE = ${DOCKER_IMAGE}
6 echo "TAG = $TAG"
7
8
9 ls -l /root
10 # Use with Ansible
11 #ansible-playbook -e image_name="${DOCKER_IMAGE}:${TAG}" ansible
```

Here we take the output variable as host this variable is passed to next stage

Stage 2: Deploy

Steps:

Step1: here we just run the script by taking ips from previous stage and perform the the ansible configuration also

```
#!/bin/bash

# -----
# Step 1: Variables from Harness
# -----
DOCKER_IMAGE="<+pipeline.stages.build2.spec.execution.steps.BuildAndPushDockerRegistry_1.artifact_BuildAndPushDockerRegistry_1.stepArtifacts.publishedImageArtifacts[0].imageName>"
TAG="<+pipeline.stages.build2.spec.execution.steps.BuildAndPushDockerRegistry_1.artifact_BuildAndPushDockerRegistry_1.stepArtifacts.publishedImageArtifacts[0].tag>"
HOSTS="<+pipeline.stages.build2.spec.execution.steps.Run_2.output.outputVariables.host>"

echo "Image = $DOCKER_IMAGE"
echo "Tag    = $TAG"

# -----
# Step 2: Write private key
# -----
echo '<+secrets.getValue("private-key-vault-ganesh")>' > /tmp/private_key
chmod 600 /tmp/private_key

# -----
# Step 3: Setup Ansible inventory
# -----
mkdir -p /tmp/ansible
echo "[vault]" > /tmp/ansible/hosts
for ip in $HOSTS; do
    echo "$ip" >> /tmp/ansible/hosts
done

cat /tmp/ansible/hosts

# -----
# Step 4: Setup Ansible config
# -----
cat <<EOF > /tmp/ansible/ansible.cfg
[defaults]
inventory = /tmp/ansible/hosts
host key checking = False
retry_files_enabled = False
remote_user = sa_117308599478039282002
private_key_file = /tmp/private_key
```

EOF

```
export ANSIBLE_CONFIG=/tmp/ansible/ansible.cfg
```

```
# -----  
# Step 5: Test connection  
# -----
```

```
ansible-inventory --graph  
ansible all -m ping
```

```
# -----  
# Step 6: Clone repo & run playbook  
# -----
```

```
cd /tmp  
rm -rf cal-deploy-harness  
git clone https://github.com/ganesh-redy/cal-deploy-harness.git
```

```
cd cal-deploy-harness  
ls
```

```
ansible --version
```

```
# -----  
# Step 7: Run playbook  
# -----
```

```
ansible-playbook -e image_name="${DOCKER_IMAGE}:${TAG}" ansible.yaml
```

Script (Bash)

```
1  #!/bin/bash  
2  
3  # -----  
4  # Step 1: Variables from Harness  
5  # -----  
6  DOCKER_IMAGE="${pipeline.stages.build2.spec.execution.steps.BuildAndPushDockerRegistry_1.artifact_BuildAndPushDockerRegistry_1.stepArtifacts.publishedImageArtifacts[0].imageName}"  
7  TAG="${pipeline.stages.build2.spec.execution.steps.BuildAndPushDockerRegistry_1.artifact_BuildAndPushDockerRegistry_1.stepArtifacts.publishedImageArtifacts[0].tag}"  
8  HOSTS="${pipeline.stages.build2.spec.execution.steps.Run_2.output.outputVariables.host}"  
9  
10 echo "Image = $DOCKER_IMAGE"  
11 echo "Tag = $TAG"  
12  
13 # -----  
14 # Step 2: Write private key  
15 # -----  
16 echo "${secrets.getValue('private-key-vault-ganesh')} " > /tmp/private_key  
17 chmod 600 /tmp/private_key  
18  
19 # -----  
20 # Step 3: Setup Ansible inventory  
21 # -----  
22 mkdir -p /tmp/ansible
